

European Academic Smart Cities Network

The main purpose of the European Academic Smart Cities Network (EU-ASCIN) project at the University of Applied Sciences Technikum Wien is to set up an academic smart cities network in Central and Southeastern Europe. Using this cooperation existing related study programs at UAS Technikum Wien will be expanded by the smart cities concept, which can finally result in an own independent joint or double degree study program. Supporting the smart cities study programs a web-based learning and information sharing platform will be implemented.

About Smart Cities

Smart cities concepts introduce the cities of the future, which make use of state of the art education and human capital, active citizen participation and e-governance, modern mixed-modal transport modes and non-

motorized transportation options, innovative ICT and communication infrastructure, efficient management of energy resources and smart grids to ensure sustainable economic growth and a high quality of life for its residents.

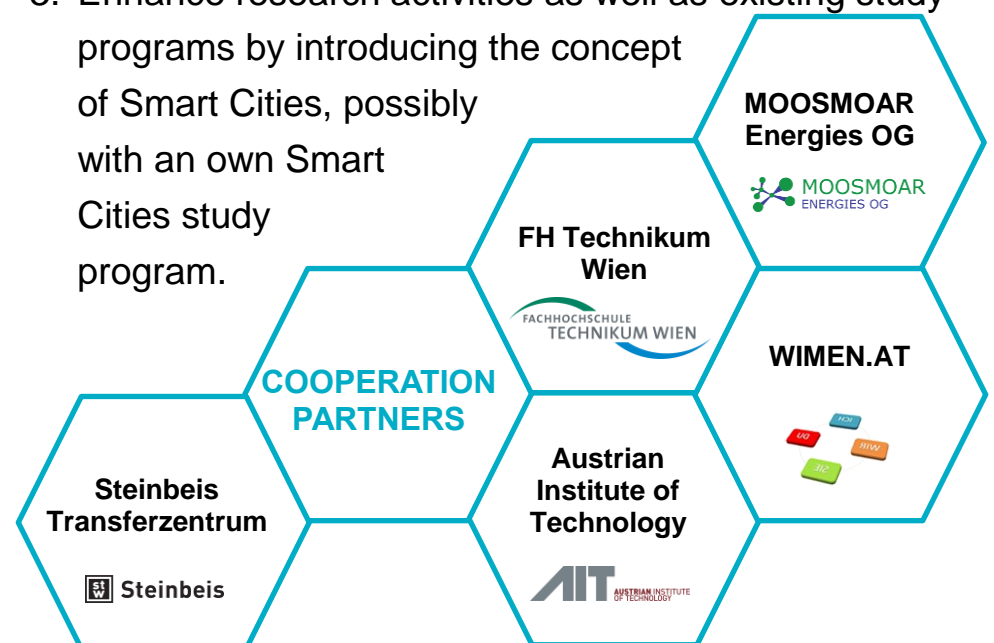

Smart Mobility

Smart mobility is a sub aspect of smart cities, which focuses on ICT supported and integrated transport and logistics systems. It prioritizes energy-efficient, sustainable, non-motorized, safe, comfortable, and interconnected transportation modes. The definition of smart mobility implies optimized and intelligent use of the infrastructure supported by real-time information, which can be accessed by the public in order to save time, costs and reduce CO2 emissions.

Project Framework

The main objective of the project EU-ASCIN is to develop professional competence in the area of smart cities at UAS Technikum Wien. In order to reach it, the project will:

1. Establish an international cooperation with partner universities, research institutions, and other academic networks,
2. Implement the informational and educational web-platform and organize the Smart Cities Conference Vienna,
3. Enhance research activities as well as existing study programs by introducing the concept of Smart Cities, possibly with an own Smart Cities study program.

Key Facts

- **UAS Technikum Wien:** Project implementation
- **Project management:** Dr. Natalie Prügler¹
- **Team:** DI Harald Wahl²; DI Peter Franz³; DI Hubert Fechner, MAS, MSc³; Ing. Momir Tabackovic, MSc³; Darya Bululukova, BSc²; Mathias Ballner, BSc²; MMag.Dr. Sandra Allmayer, MA⁴; Mag.Dr. Günter Essl⁵
- **Duration:** November 2013 – November 2016
- **Funding:** MA 23
